BODLEIAN LIBRARY

1657.

Apollo Anglicanus.

THE ENGLISH APOLLO;

Astronomically observing, and Astrologically demonstrating those grand Catatrophes and superlative actions designed by the heavens to be visible or manifested in the world, this present revolution, 1657.

With necessary Tables, of most useful consequence, fitting all persons in all conditions.

A twofold Kalender, viz. Julian or English, Gregerian or Foreign Computation, more compleat and full then in any other, with Chronological Observations

Being the first after Leap-year.

By RICHARD SAUNDERS Student in the Celestial Sciences.

Cognosce alia, ut te cognoscas, cognosce teipsum, ut cognoscas Deum.

LONDON,

Printed for the Company of *Stationers*. 1657.

The Law ſtill lives, but dumb, ſhe dares not ſpeak,
Some are ſo bold, that dare her Limits break.

September | March | February | January | December

October | November | December

THose two Tables before-going are of excellent use; and as they do perfectly, so they do most readily, at one cast of the eye shew you the time, the hour and minute of Day break, Sun rising, Sun setting, Length of the Day and Night, and Twilight, throughout the year without trouble, very pleasant to be considered.

In the next Column look for the name of the month, in which ye desire to know any of the aforesaid conditions, which you shall find on the right hand ascending, or on the left hand descending; then in the next Column thereto, find out the Day, or the next thereto, which is every third day, and if the month be on the left hand, right against the day in streight Angles towards the right hand you shall finde the hour and minute of any the foresaid, as you finde at the head of the Table, and note that H. signifies houres, and M. minutes; and if your month be ascending on the right hand, then cast your eye towards the left in streight angle, as you did before, this is very same: yet I will annex one Example. The 22 day of September, I would know all that is aforesaid, I find September in the second Page descending to the left hand, casting my eye towards the right hand in the common angle, I finde under the Title break of day, 4 hours 20 min. which shews exactly at that time is break of day; in the next Column is 6 25 which shews the true time of Sun rising; in the third Column is 11 houres 2 minutes, the length of the day; and in the fourth Column, 56 the length of the night; and in the fifth Column 5 hours 41 minutes, the setting of the Sun, and in the sixth Column 7 hours 40 minutes, the twilight, or closing in of day light, and so of all other days.

A Table to know when the Moon will be full South every day this year, whereby the time of Tides is exactly known.

Moon Age		Hes being fouth.

15	30	12	0
Day	Day	Hours.	Min.

First find her Age in the 6 Column of the Almanack, which is exactly every day noted; which Age seek out in one of the two columns of this Table to the left hand against which (in the 3d. column) is the hour and minute which shew the time of her being south.

As for Example: The 24 day of March, the moon is 19 days old, therefore south at 3 and 12 minutes.

Here note, that all the increase she cometh to the south in the evening following the Sun; but in the decrease in the morning going before the Sun.

By any Sundial you may know the hour of night, by adding to the time of the moon being south after, or substracting before.

To finde the time of High-water in most Coasts of *England*.

First, as you before were taught, finde at what time the Moon will be South, for then you may truly conclude it High-water at *Southampton*, *Quinborough* and *Portsmouth*, for there the South and North Moons make a High water; But when you desire the time of Full-sea in any of the following Coasts in the ensuing Table, finde the name of the place, and see how many hours and minutes be annexed thereunto in the column under *H. M.* which added to the time of the moons coming to South, gives you the time of high-water for the place required.

	H.	M.
Rochester, Maldon, Aberdeen,	0	45
Gravesend, Romney, Rumkins,	3	30
London, Tinmouth, Hartlepool,	3	0
Frith-Leith, Danbar, Narbon,	4	30
Newcastle, Fulmouth, Humber,	5	15
Lin, Antwerp, Plimouth, Hull,	6	0
Bristol, Lanion, Foulnesse	6	45
Milford, Bridgewater, North-coast,	7	30
Portland, Peterport, Hartslew,	8	15
Dover, Yarmouth, Harwich, Dublin.	10	30
Callice, Rye, Winchelsey, Calshot.	11	15

Example.

The 4 of March this year, it is required to know the Time of Full-sea at New-castle: by the Kalender over against the 24 of March in the sixth Column, I finde the Moon nineteen dayes old: and by the foregoing Southing-Table, I finde the Moon South at 3 houres 12 minutes in the morning, then in the preceding Table against New-castle, I finde 5 houres 3 minutes, which added to 3 houres 12 minutes, the aggregate is 8 houres 27 minutes, wherefore I conclude it High-water there at 8 houres 27 minutes in the morning, so of any other.

Take notice that the Tide floweth one point of the Compass more at the Spring-Tide (which is the New and Full Moons) then at the Neap Tides (the first and second Quarters) as also the latitude of the Moon and Winds, may alter it an hour sooner or later; let it be their providence who depend upon the Tides, to make timely provision.

The Tydes like tymous Humors never rest,
Stil constant in unconstancy at best.

Phœbus and *Zeus* jar, and *Phosphorus*
By sakifer's oppos'd, fierce *Gradivus*
With *Chronos* squares, high storms will stoutly drive,
Toss the blew billows, knotty Oaks up-rive,
Congeal soft snow, and peal the earth with hail
The fury of the Gods o're men prevail.

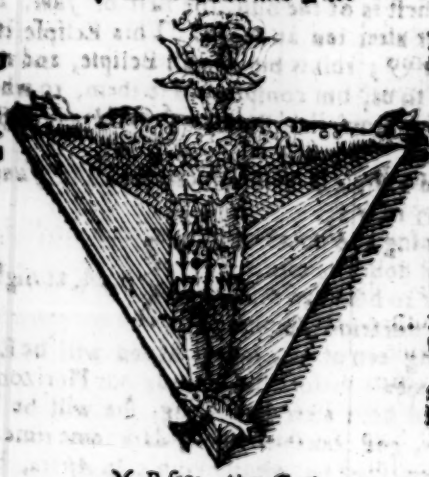
The Anatomy of Mans Body, as the parts thereof are governed by the twelve Cælestial Signs.

♈ Aries, Head and Face.

♉ Taurus, Neck and Throat.

♊ Gemini, Arms and Shoulders.



♋ Cancer, Breast and Stomach.

♌ Leo, Heart and Back.

♍ Virgo, Bowels and Belly.

♎ Libra, Reins and Loyns.

♏ Scorpio, Secret members.

♐ Sagittarius, Thighs.

♑ Capricornus, Knees.

♒ Aquarius, Legs.

♓ Pisces, the Feet.

From head to foot, this Figure here presents
Fates Emblem, and the Worlds inconstancy;
Times various humors fraught with discontents,
Their tottering Estate, and instability:
There's nothing in this world but's slippery found,
As if on fish you stood in stead of ground.

OF

ECLIPSES

This Year, 1657.

THe first is of the Sun, the first of *June*, half an hour after ten at night. This Eclipse is in ♊ near ♉; this is but a small Eclipse, and not visible to us, but conspicuous to them, to whom the South Antartick Pole is elevated 47 degrees, in the Pacifick Sea.

The second Eclipse is of the Moon, the 15 of *June*, 5 degree of ♑ near ♋.

The beginning at 6 hours 55 min. }
Middle at 8 hours 44 min. } P. M. at night.
The end at 10 hours 30 min. }
The whole duration 3 hours 45 m.

But not so long seen of us, for the Moon will be Eclipsed one hour and a half before she ascends our Horizon; and within half an hour after her rising, she will be totally Eclipsed to us, and continue wholly dark some time.

This Eclipse shall be wholly visible in *Africa*, beyond *Numidia*, *Gracia*, *Asia* minor, *Arabia*, *Persia*, *Syria*, and the places in and adjacent to the Euxine and Caspian Seas.

The rest of *Asie*, with the Islands adjacent, *New Guinney* and almost all *Tartary* shall see the beginning thereof.

But the end is visible in *Europe*, the *Canaries*, *Azores*, *Fesa*, *Marocco*, *Guinea verde* (Old *Guinney*) and the South part of *America*.

The North Trade of *America*, and the Pacifick Sea, will be unapprehensive of it.

The third Eclipse is of the Sun the 25 of *November*, past seven in the morning. This will be a very great Eclipse, but not seen of us, for the Sun will recover his light before he ascend our Horizon.

This Eclipse will chiefly be conspicuous to the South parts beyond the Tropick of *Capricorn*, as the East parts of *Africk*, the *Indian* Seas, and *Magdagascar*. I wish it may be observed by those that pass those parts.

The fourth and last Eclipse this year, is of the Moon, *December* 10; the beginning a little before six at night, the middle presently after seven, the end at half an hour after eight; the continuance is two hours and a half. This will be but small, about the third part of the Moons body will be dark; it will be seen of us, if the skie be clear.

This Eclipse will be visible in *Asia* and *Africa*, beyond *Numidia*, and all *Europe*, except *Spain*, which will not see the beginning thereof; neither *Africa* on this side *Numidia*, but New *Guinny*, *Insulæ Latronum*, *Sierra*, *Nevado*, shall onely see the beginning, but not the end.

The South part of *America* beyond *Brasil*, and the North part beyond *Nouafrancia*, shall see no part hereof.

We have but onely one Eclipse considerable with us, which is of the Moon, the 15 of *June*.

The effects of which, principally concern the Turkish Empire, and his Metropolis of *Constantinople*. I wish him the like success he had the last year at Sea; and if the *Venetian*, and other Christian Princes, follow him close, they will pluck many of his gay feathers, some of his perfum'd Islands *vel aliquid tale*; the South-west part of the West-Indies are herein likewise concern'd, with *Saxony*; the *Swede* and *Pole* will get and lose, if not a peace; *Scotland* and *Holland* are not free from affliction, and yet injuring their neighbors; let *Zealand* take heed they make not a scourge for their own backs; *Amsterdam* is threatned with evil, but whether sickness or otherways, time will discover, but *Englands* Gardian-angel is discontented, and seems to deny present protection.

I pray

I pray God for good to *Oxford* and *York*, with *London*, likewiſe *France* is not free. *Ecce & vide.*

The Malevolents have chiefeſt domination in this Eclipſe, *Mars* exceeding in 17 eſſential fortitudes, *Saturn* 10 and his *Dominus deliquii*, *Venus* hath weakly 8, all others much debilitated. Then (*Hanc ob cauſam quod cum duo ſint reges in Cœlo, Sol & Luna altero deficiente ſeu eclipſin patiente, in locum ſuccedat Planeta, qui iſto tempore plurimum valet, ſeu majoris eſt dignitatis & virium nunc ſi benificus fuerit benefaciet, ſi maleficus male*) may we not expect a malevolent concluſion, when the malevolents have chief domination; for *Saturn ubi dominationem fortitus fuerit* (as here) *Cauſa eſt univerſalium corruptionis, a frigore.* To the bodies of men is ſignified lingring Conſumptions with a languiſhing decay of the bivers, Lungs, and all the Vitals of man; a catachexical diſtemper of all the humors, with Fluxes and Quartain Fevers from Cathars and Tiſſical oppilations.

In the affairs of Life, he is the author of exiles, want, poverty, anguiſh, ſorrow, fears, and death or ruine, eſpecially to age, furthering all their diſtempers; amongſt cattle that principally are for mans uſe, he threatens death, and contagious diſeaſes to them that remain according to their ſeveral kindes.

The Air is dull, cloudy, groſs, thick, troubled, peſtilential, infectious with noxious colds, and it may be deſtructive ſnows. On the Sea, raging, fearful, devouring tempeſts, with deſtruction to fiſh in Rivers, and many other calamities prejudicing man and beaſt; thus for *Saturns* Equipollation in this Eclipſe.

Mars dominium arripiens is the general cauſe of diſtempers through over fervent heat, fraughts, mens ſpirits with choler; whence proceed Wars, inteſtine Seditions, ruine of Cities, tumultuous Inſurrections of people, wrath of Princes, producing violent and unexpected deaths.

The bodies of men are afflicted with billows, diſtempers, Tertian and putrid Feavors, eruptions of blood, acute diſeaſes, and ſudden violent deaths, eſpecially to youngmen and women in their full ſtrength.

The lives and fortunes of men are threatned with violent and injurious dealings, envies, murthers, rapins, theefts, and what not; with beading and hanging under the notion of Treason.

The Air is infected with a hot, pestiferous, tabrificous, poysonous quality, raging sudden tempests, jaculations of thunder, with whirl-winds, bringing great dreadour and danger. On the Sea sudden shipwracks caused by sulphury storms and tempests; the Rivers dryed and corrupted; the Fruits of the Earth exhausted and wasted by often conflagrations. That small power that *Venus* interposeth, I hope may somewhat meliorate these mischiefs too probable else to betide us.

The effects of this Eclipse continue till the latter end of *August* following.

These certainly are the signals of an angry God, demonstrating his highly offended displeasure, against a treacherous, perfidious, hypocritical, double-dissembling, base-spirited people as we are. Religion (contrary to the sincerity and humility of the Gospel) is prostituted both by Prince and people) as a Pander to all self base ends, preferments and purposes; so that it may now fitly come into a Proverb, *Nil sine hierotheca*, nothing obtained but by the vizard of Hypocrisie, Saints, and Divels in the same skin.

Presently upon this Eclipse is an opposition of ♄ and ♂. In *October* again by the retrogradation of ♂; in *December* the like, three times inclos. then half a year. Therefore may we justly think the foresaid evils not diminished, but rather that Divine Vengeance is pursuing us to an eradication.

I conclude with *Proclus*, *Luna eclipsata in primis decem gradibus Capricorni, sugillationes in homines movet, & præsentis alicujus viri perniciosam cædem ostendit, &c.*

Of the four Quarters of the Year, and first of Winter.

Solstitium Hyemale, or Winter (the first *Quarter Astronomical*, but the last according to the English account) takes beginning

beginning the precedent year 1656. *December* 10. (being Wednesday) 50 minutes after eleven at night; at which moment the Sun enters, according to the apparent time, the first scruple of *Capricorn*, which time was supposed to be the day of *Christs Nativity*, and then the shortest day in the year, being then the 25 of *December*; but the Suns entrance into this Tropick, is not now the 25 day, by reason of the anticipation of the Equinoxes and Solstices, going back near one whole day in every 134 years; so that the Suns entrance into the same point, was the year precedent 1655, the 11 of *December*, 51 min after six at night, in our Horizon, but is the year 1656. as above mentioned, near 14 days since the birth of our Saviour, by anticipation gone back; and so much is the difference political and astronomical of *Christs Nativity*, which in process of years (if our accompt remain uncorrected) will fall in Summer, notwithstanding the reformation used beyond Seas; for neither that, nor the old accompt, are true; for the reformed accompt (although exactly for the time) was but calculated from the *Nicene* Council, in *Anno Christi* 328. to the year 1582. Whose radix should have been the time of *Christs Nativity*, the reformed year contains less then the *Julian* by 10 firsts, 44 seconds, which in 134 years comes to a day within a minute. And this (though small) anticipation of the Equinoxes, will cause in the space of 22627 years, that the shortest day in the year shall fall on St. *John Baptist*, the 24 of *June*, and *Christmas-day* will be the longest day in Summer! But I hope in time Publick Authority will incourage Artists in the reformation hereof, and many other errors in computation.

But to leave this, this season is Summers antagonist, and the strong resistance of cold now abounding, binds up the pores of the Earth, that the small heat thereinto emitted, cannot evaporate, but being restrained and confined within the bowels thereof, nourisheth the Roots of Trees and Herbs, and causeth the Earth to act the part of a pregnant Mother; howbeit she brings no increase, because neither moisture nor heat (whence all increase proceedeth) as yet

ascends; and as in the Earth, so likewise in the body of man, the pores are contracted and shut up by reason of cold condensing, whereby the heat (not able to evaporate) is kept within, and so fortifies and strengthens mens stomicks more in this, then in any other season of the year; and therefore it is, that Physitians advise us to meats in quality, hot and dry, as most conducing to health.

This quarter (in the general) is cold and moist, but at the beginning thereof (during the Suns abode in *Capricorn*) more cold then moist in the midst (the Sun in *Aquary*) equally cold and moist; but at the end (whiles the Sun is in *Pisces*) more moist then cold.

Amongst the Elements, Water is assimulated to Winter; of the humors, flegm, of complexions and constitutions, the cold and moist; and of mans ages, the decrepit; moreover, as persons that be flegmatick, are commonly sick or distempered this season, because flegm is then increased, so on the contrary, cholerick people are now best in health: And as in Winter (when flegm is predominant) old men are sick and ildispos'd, so on the contrary youngmen are then best in health, and less subject to sickness.

As to diseases, those are the worst which deduce their original from flegm, as Quotidian Fevors, the less will be such as proceed from choler, as the Tertian. The diseases that commonly attend this quarter, are Rheums, Coughs, Cathars, Noxious distillations, Plurises, and Inflamations of the Lungs, Tumors, Hoarsness, pains of the Brest, pricking in the sides and Loyns, Head aches, Vertigoes, and Apoplexies; these Winter maladies are for the most part durable, and acronick, yet sometimes mutable according to the various constitution of the season, and the precedent temperature of the Air. And thus much of the general and proper temperament of the Winter; a more particular light be added from the position of the Heavens at the Suns entrance into the Winter Tropick.

In my Astrological Animadversions of this year, I premise for grounds, not onely the quarterly Ingresses, Preventional and Postventional, new and full Moons, but the more

more principal, as the grand revolutions of the world, the great and smaller conjunctions, the progressions of the great Orb, the change of the *Absides* of the Planets, the Suns excentricity and obliquity of the Zodiack, preceding Comets and Eclipses, as well as present, its necessary all Judicials to be built upon, and carried through these grounds, as I have more particularly ascented in my former Almanacks.

The Preventional new Moon is celebrated on Friday, the 5 of *December*, 21 degrees of ♌, then ascending *Cor Leonis* near the Ascendant, & 87 degrees in the mid Heaven, the Luminaries conjoyn'd in the fifth house of Heaven.

The Postventional full Moon is on Sunday the 21 of *December*, 27 degrees of ♐, then culminating with ☿, and 22 degrees of the Fishes arising in the East.

In the Ingress is ♍ 28 deg. ascending, and ♈ 28 deg. culminating. All which considered in dignities and debilities, stand thus ♄ 12. ♃ 26, ♂ 15, ☉ 1, ♀ 4, ☿ 5, ☽ 14 dignities. Hear ♃ claims chief rule in this quarter, next ♂, then the ☽, lastly ♄, the other are not considerable.

Jupiter here promiseth remission of cold, healthful, and North-winds about *Christmas*, a good time at Sea, an inclination in some great and eminent persons to the Study of Astrology, and the laudable secret Sciences. His Position in the ninth, the Lawyers take part with the Priests for the maintenance of Tithes, and carry it strongly on.

Mars as copartner in *Signo propr. o multum pluit*, intimates much rain being in *Scorpion* in the 20 degree, about the latter end of *January* and *February*. *Pitatus* saith, *Abundabunt pluvia, si Mars ex me venerem intuetur*, as here, then we must expect wet to abound, which will prejudice Seed time, and Wheat amongst persons. *Inimicitias & odia auget, & societates possim dissipat.*

The *Moon* hath her signification in reference to women and children, promising them good deliveries & safe births.

Saturn will oft intermix Frost and Snow, and chiefly in the Northern parts, but being in his exaltation, *Ignem flatum & lucra in administratione ei familiaris pollicetur.*

Rheums and colds, much frequent this quarter.

Its very observable, that presently after the ingress, the ☉ applies to a square of ♄. This signifies some great Prince glad to seek help of his mean subjects, possesseth him with great fears, as the people with griefs and vexations; for Princes will cast subjects into prison, their subjects will cast adversaries to them, even their Religious brethren, and those that study the Law.

Of the Spring.

Equinoctium Vernales or the Spring-quarter begins so soon as the Sun toucheth the first point of the Equinoctial Sign *Aries*, which this year is the ninth of *March*, 18 hours Post-Meridian, or *March* 10 at one a clock in the morning, the days and nights being then equal all the world over, except the Polar Circles, the Sun being equally distant from the poles then, being neither to remote from, nor yet too near our vertex; and so the air neither too hot, nor too cold, too dry nor too moist, but equally mixed of all the four qualities; by which temperature the pores of the earth are opened, and a moist vivifying fume evaporeth, which ascending, breathingly by the chilified Roots of Herbs and Trees, produceth their increase and vegetation.

The proper nature of this season is hot and moist, but yet inconstant; for now it is rainy and moist, by reason of the nearness of winter; anon remissly hot, and then it is cold; howbeit heat and moisture do therein principally abound; heat, because of the Suns approach towards our Zenith, moisture in regard of the precedent winters proximity; nevertheless, at the beginning of the Spring, whilest the Sun is in *Aries*, moisture prevaileth over heat; at the midst whilest he is in *Taurus*, heat and moisture do equally predominate; at the end thereof, during his abode in *Gemini*, heat aboundeth more then moisture.

Amongst the Elements, air doth most resemble the Spring time, of the humors, blood; of complexions, the hot and moist; of ages, childhood: Now such persons as be natu-

rally,

rally melancholick, are most healthful, Sanguine the contrary; old men are better, children worse: That distemper most dangerous, which draws its original from blood putrified or corrupted, as Synocha or continual Feavers, that which proceeds from melancholly is less noxious, as the *Quartane*.

About the time the Sun approacheth the Equinox, people will be subject to fall into sicknesses, because that then their moist bodies and pores thereof, are opened with heat, which beginneth to increase, and cold afterward, as evenings and mornings, oft times supervening are thereby distempered and corrupted.

The diseases commonly invading us this quarter, are, *Melancholy*, *Frenzy*, *Madness*, and the effects of *black choler*, *Fluxes*, *Rheums*, *Squinnees*, *Falling sickness*, *Coughs*, *Hoarsness*, *Leprie*, *Ring-worms*, and *Tetters*, *Ulcerous Pushes*, or *Blains*, *Pimples* or *Wheals*, with pains in the Joynts, *Cholick Pluriſies*, shortness of breath, faintings, palpitation of the heart, and burning *Feavors*, yet the Spring-diseases are most part short, and rather healthful then hateful and deadly.

This I observe to be the general temperament of the Spring, the particular ariseth from the consideration of the position of the Heavens at the Suns ingress, which follows. Wherein *Jupiter* claims the predominancy of this quarter by much, as being decorated with 40 essential dignities, in the preventional ☌, the post-ventional Full Moon, and the ingress. Next is *Venus*, the other Fortune, who is dignified with 28 essential fortitudes. *Saturn* hath 16 dignities, and claims the next place. Lastly the ☽ 15. all the other are very weak, so that the constitution of this quarter principally depends upon the benevolents and fortunes. *Mars* is very weak here, sure he is mastered, or else he hath his will he is so quiet. In the *Suns* ingress ♂ is in his exaltation in the second house, ♄ exalted in the 10 ♎, ♀ in her house, and the ☽ exalted with her. Surely great magnificence and matters of high concernment will be acted amongst us.

Jupiter and *Venus* promote wholsom lubricous winds,

health-

healthful and good to man and beast, promise gentle weather, which many fertile showers, if not too much rain; for ♄ and ♇ are retrograde, stirs up the minds of young people infinitely to amorous actions, which, but observe, and you will experience more marriages, more children begotten lawfullly and unlawfully, then in your age before in one Spring, yet many women will be overcome by dissimulation.

As to publick affairs, Superiors shall lord it over others, to the discontent of the vulgar, and in many places unjust Taxes and Impositions, to the great grief of the bearer. *France* may before long change her Government, but we in *England* shall (through Gods grace) ere long experience a settlement; but let us beware of strangers this quarter and the next, lest we betray our own lives.

Saturn in ♎ transiting the Cusp of the ninth in the great Conjunction, will bridle those narrow spirited men *Bable-builders*, (who *Augustus* like) will take upon them to tax all the world, that are not Humorists as they, or of their opinion, when a wise man will say it is as impossible for all men, or any men to be of the same opinion *ad idem vel ad punctum*, as to be of the same Physiognomy: For as the temperaments of men differ more or less, so will their apprehensions of things, and judgments. Therefore cursed is that *severity* that shall injoyn an impossibillity; this point if rightly understood, would take of more rankor, and create more peace in the world, then is imaginable. But this place is to narrow for this subject. I hope the milde and wise will comment upon it, and esteem that power which imposeth on mens consciences, to be, as indeed it is *Cosmo-politick*.

Of the Summer.

Solstitium Æstivum, or the *Summer Quarter* commenceth this year, when *Sol Cælestium princeps & planetarum*, enters the first scruple of *Cancer*, which is the 11 of *June*, at four of the clock in the morning, when by his utmost Northern perambulation he makes longest days and shortest nights, to

all

all on this ſide the Æquator; which quarter continues ſo long as the Sun is running through *Cancer*, *Leo*, and *Virgo*, during all which time, he burns and dries up the earth; and therefore the Summer is hot and dry, heat predominating at the beginning, ſicciy at the end, and an equal conſtitution in the middle hereof, being equally hot and dry.

Now the vertue of this ſeaſon is to dry up the Roots of Herbs and Trees; the ſympathious reſemblance holds thus amongſt the *Elements* fire, of *humors*, *choler*, (or a yellowiſh melancholly) of *complexions*, the *hot* and *dry*, and of *ages*, *youth* agrees to the Summer. The Flegmatick are (at this time) beſt at eaſe, and the cholerick worſt, it revives decrepit old age, and is contrary to youth, becauſe they are full of blood and choler, and dangerouſly expoſed to Feavers, eſpecially the Tertian, for the diſtempers which ariſe from blood and choler, are much more dangerous then thoſe which ariſe from flegm.

The diſeaſes incident to this Quarter, are acute Feavors, continual and burning hot ſickneſſes, and *Agues*, *Synochi* (or continual Feavors) *Tertians*, *Vomiting*, *Alvi proflvia*, *Bluſters*, *running* of the *Eyes*, pains of the *Ears*, *Ulcers* in the *mouth* and *Noſe*, red and angry *Wheals*, *& genitalium punctures*; and ſuch is the temperature of this ſeaſon in general, the particular ſhall inform us farther. For juſt when the Sun enters the Tropical ſign ♋, is he in ☌ with *Ca* do in the Aſcendant, and likewiſe in □ to ♄. This Aſcendant ♋ being the ſame with the Revolution of the great conjunctiõ, this ſignifies much bloodſhed wherever it lights, eſpecially at Sea, and between Princes and Subjects, fears and jealouſies, which will produce diſcontents in the one, and Tyranny in the other, the effects of which may eaſily be judged. *Jupiter* and *Saturn* have equal domination in this Quarter having each 21 dignities, the ☽ 16, ♀ 15, ☿ 11, & ♂ but 8; this being ſo near the Eclipſe in *June*, the effects do utterly ſympathiſe likewiſe, which may be ſeen in the judgment of the Eclipſe, onely expect ſome memorable burnt or combuſtion, and (unleſs the mercy of God prevent) ſome violent raging ſickneſs.

Of

Of Autumn.

Æquinoctium Autumnale, or the Autumnal Quarter takes beginning this year, the 12 of *September*, 41 minutes past six afternoon, the Sun then crossing the worlds Axis with a right angle, shall make equal day and night in every Horizon, in both Hemispheres. This quarter continues till the Sun have made his progress, through *Libra*, *Scorpio*, and *Sagitary*; and is in its own nature, cold and dry, but at the beginning more dry; at the end more cold, and in the midst indifferent betwixt both. Amongst the Elements, *Earth*; of *humors*, *melancholy*; of *complexions*, the *cold* and *dry*; and of *ages*, *old age* is assimulated to *Autumn*. The *Sanguine* complexioned people are now best in health, the *melancholick* most afflicted, best for children, worst time in the year for age, dangerous and sad is that sickness, that deduceth its original from *melancholy*, less prejudicial that which proceeds from blood. This also is a time very unequal, and the worse, by reason of the vicinity of the precedent Summer, and the subsequent Winter, many people indiscreetly, much indangering themselves by the juice of the Fruits now abounding. *Black*, offensive *melancholy*, is at this time most nourished by the season, and so groweth predominant; whence ariseth flegm of the stomack, causing many other diseases; as *Erratick Feavors*, *Quartans*, the *Strangury*, the *Spleen*, *Consumption* of the *Lungs*, *Pains* of the *Hips* (or *Sciatica*) *Squinancies*, difficulty of breathing (or *Tissicks*) *Madness*, *Falling-sickness*, and the like, which more particularly shall be observed on this season.

In the preventional Full Moon, and postventional New Moon ♄ predominates in the *medium cœli* in his exaltation, near the opposition of *Mars*, who twice this quarter opposeth him (*viz.*) the 11 of *October* by Retrogradation, and the third of *December* by Direction. In the ingress in ♎, ☿ is with the ☽ in the Horoscope, and ♄ on the 7 with ☿, both *sub radiis*, ♄ there afflicting the Sun, besides in the computation of quarterly testimonies *Saturn* hath 37 digni-

ties,

ties, *Jupiter* 21, *Venus* 16, *Mars* 5, the other weak. Thus from the collection of testimonies, ♄ hath chief predominancy, and threatens much Snow this quarter, by reason of his oppositions with *Mars*, *Nam omnes magnæ constitutiones in hyeme ad Nives proclives sunt.* And again, *ſaith Proctus*, *Nix maxime fit ab Humido ſubtili, & ideo a calidis planetis ac ſignis juvatur.* This is all made good in the oppositions of ♄ and ♂, therefore much Snow may be expected, but because ♃ and ♀ have partly rule this quarter, and ♃ is principal ruler throughout the whole year, as having 108 proper essential dignities, ♄ next hath 86, ♀ 59, the ☽ 45, ♂ 28, ☿ 20, and the ☉ but one; so that without question the year will admit of more cold and wet, then the last year, wherein ♂ had chiefest domination; and I hope ♃ predominancy in relation to higher, and foregoing causes, may much mellorate the temperature of the Air, making it more wholesom; but ♃ is weak in his position all this year, and therefore the less able to do us good; so that it concerns us to be the more careful of our bodies, for the distempers of the quarter will much avail, and what they are, you may see in the discription of every ingress: In the Publick we shall see Ambition justling, brooking no Co-peer, till some be predominant, which if we acquiesce in our selves, we may have peace, and live quietly, otherwise contradiction works its own wo. The Laws will flourish, and they that profess them, yet must they abide reduction, and suffer some changes in the form and method, the Clergy that are honest likewise, *ſic opto.*

The use and Explanation of this Table.

The first Column towards the left hand, sheweth the Years of a Lease or Annuity, and right against each Year, is the Years, Moneths, and Decimal parts of a Moneths Purchase, that such a Lease or Annuity is worth.

Example.

Suppose a Lease or Annuity to continue ten Years, and you would know how many years purchase it is worth present money, look in the Table for ten years of a Lease to the left hand, and against the same you shall finde 7 4, 3. which sheweth such a Lease to be worth seven Years four Moneths, and three tenth Parts of a Moneths Purchase.

Again, are you to take or buy the Reversion of any Lease or Annuity, work thus. Suppose the Lease to be thirty Years in all, you finde in the second Table, and right hand against thirty, thirteen years, nine moneths, and two tenth Parts of a Moneths Purchase; this were worth, were it in present possession. But suppose there be a Lease of five Years (more or less) before your Commence, look in the Table against five Years, and there you finde four Years, two Moneths, five tenth parts, half a Moneths purchase: take this out the Sum against thirty, which is 13, 9, 2. 4, 2, 5. The remainder is nine years, six Moneths, seventh tenth parts of a Moneth; and so much is the Reversion after five years worth, for the Remainder of thirty years. This is useful and very easie.

This two years I have published in my *Almanack*, most necessary Rules of Direction for *Merchants*, and *Men of War*, as the event hath proved to the knowledge of *Ingenious Men*, and will appear to all, if the events of the *States Fleets* and *Merchants*, be compared with those grounds; but the inconsideration of Men in Authority and *Merchants*, and the covetousness of some *Book-sellers* have deterred me from publishing that, and a fuller compleat *Subject*, fitting the benefit of all men, but now resolved onely for the private inspection of deserving persons.

By *Richard Saunders*.
